

Title: Revised Building Standards for Lime Binders
(BS EN 459:2010 for Building Limes)

Duration: ½ day, 9.00am-1.00pm

Detailed Description

Revised Building Standards for Lime Binders (BS EN 459:2010 for Building Limes)

You might think building standards are as 'dull as ditch water' but working to relevant British and European standards for conservation work should be seen as best practice.

More recently the standards for building limes have been revised to make the descriptions of binders more clear in terms of their setting and hardened properties and also to capture the range of formulated and blended binders (principally for new build applications).

This seminar will address the changes in the standards for building limes and explain the differences between HLs, FLs and NHLs. If you regularly specify lime mortars for conservation, repair and restoration work, or indeed new build, then this seminar is a must!

Suitable for:

Suitable for building and heritage professionals such as architects, surveyors or planners.

This seminar would also be of interest to building contractors and those responsible for maintenance works to traditional buildings or those considering a renovation or conversion project.

We are always happy to help learners choose the right course. Please contact us if you would like to discuss which course is suitable for you.
