

Leadworking Part 1

Brief Description

Design, specification, and handling of lead sheet.

Short Description

This course will address various aspects of design, specification, and handling of lead sheet.

Detailed Description

Leadwork seminar - part 1

This one day seminar is delivered by the Lead Sheet Association and suitable for anyone involved in the construction industry who needs to have a better understanding about the use and specification of this ancient product in both a new and historic context.

This course will address various aspects of design, specification, and handling of lead sheet that will involve both technical presentations and practical hands on sessions. Delegates will gain a better understanding of the use lead sheet and how to identify problems that may arise during the specification and installation process. In gaining this insight you or your company would be able to deal with issues that could occur during the design stage or on site and manage them efficiently.

Presentations are fully supported with free technical information and the practical sessions will give an appreciation of working and forming lead sheet.

Topics include:

- Main uses of rolled lead sheet and methods of manufacture
- Review of the main causes of failure in leadwork
- Methods of detailing and fixing
- Identifying errors in installation
- Health and Safety

Suitable for:

Architects, surveyors, conservation officers, clerk of works, building supervisors and contractors would benefit from this seminar. Contractors or those wishing to up skill and consider a career as a Leadworker can also undertake the second day of this seminar, which will cover practical bossing and welding exercises.
